Election/Restrictions

Applicant's election with traverse of Group I in the Paper filed 01-22-04 is acknowledged. The traversal set forth is moot because applicant canceled claims 17-20 in the amendment filed 01-22-04.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Applicant has amended the instant claims to recite an aqueous solution of an amine salt prepolymer formed by reaction in an aqueous solution and to specify that the epoxy-amine adduct species are formed from a secondary amine. The amendment overcomes the rejections of claims of record. WO 97/14750 teaches an epoxy-amine adduct prepared by reacting an epoxy compound with a tertiary amine in water/organic solvent to provide quaternary ammonium hydroxide groups. The quaternary ammonium hydroxide groups are converted to quaternary ammonium carboxylate groups by reaction with an acid, preferably an unsaturated acid. The instant claims now exclude the species of epoxy-amine adduct taught by WO '750. Traenckner et al '918 disclose epoxy-amine adducts reacted with acrylic acid but do not teach reaction in an aqueous mixture or an aqueous solution of the product. The prior art of record and otherwise known to the examiner does not teach an aqueous solution of an amine salt prepolymer formed by reaction of an unsaturated carboxylic acid and a urea formaldehyde resin, melamine formaldehyde resin, amine-polyisocyanate adduct or a Michael adduct of a secondary amine and (meth)acrylate compound.

The newly cited prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stevenson et al (6,087,417) disclose aqueous coating compositions comprising a reaction product of an epoxy resin, acid and tertiary amine.
